## softwall + softblock modular system

standard heights:

305mm (1')  
610mm (2')  
915mm (3')  
1830mm (6')  
2440mm (8')  
3050mm (10')  
custom heights available

standard colours:

paper · natural brown  
paper · black  
paper · indigo blue  
textile · white  
textile · black  
textile · any custom colour  
modified textile · white

softwall + softblock is a modular, free standing, flexible, partition system at the core of molo's soft collection of paper and textile structures.

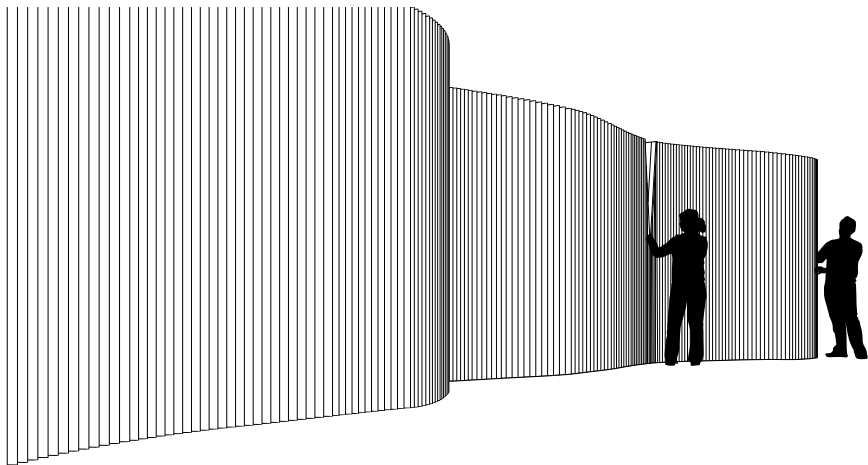

Utilizing flexible honeycomb, to expand, contract, and flex, each element is made in three material variations - paper with 50% recycled content, and two types of paper-like 100% polyethylene non-woven textiles.

modular magnetic end panels connect softwall + softblock to one another creating long continuous partitions of any desired length. molo's softseat fanning benches also connect magnetically to softwall + softblock, or the magnetic end panels can anchor to any other steel surface. A steel strip accessory is available from molo to create anchor points on walls, columns or cabinets.

The poetic yet pragmatic characteristics of softwall + softblock offer the ability to quickly and easily shape light, acoustics, and space. The translucent white textile versions of softwall + softblock diffuse sunlight or may be illuminated from within by LED.

acoustic and fire rating documents available

design by Stephanie Forsythe + Todd MacAllen

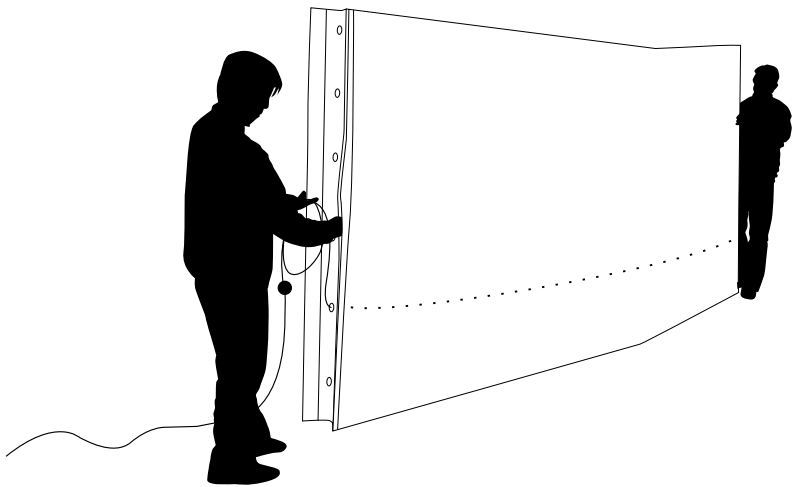

All elements in the softwall + softblock modular system can connect to one another by modular magnetic end panels in an almost seamless way, as vertical joints between elements blend with the rhythm of the vertically pleated structures. The integrated magnets can also anchor softwall + softblock to any ferrous steel or magnetic surface. molo has a white powder coated steel strip accessory to connect softwall to any fixed wall, column or cabinet.

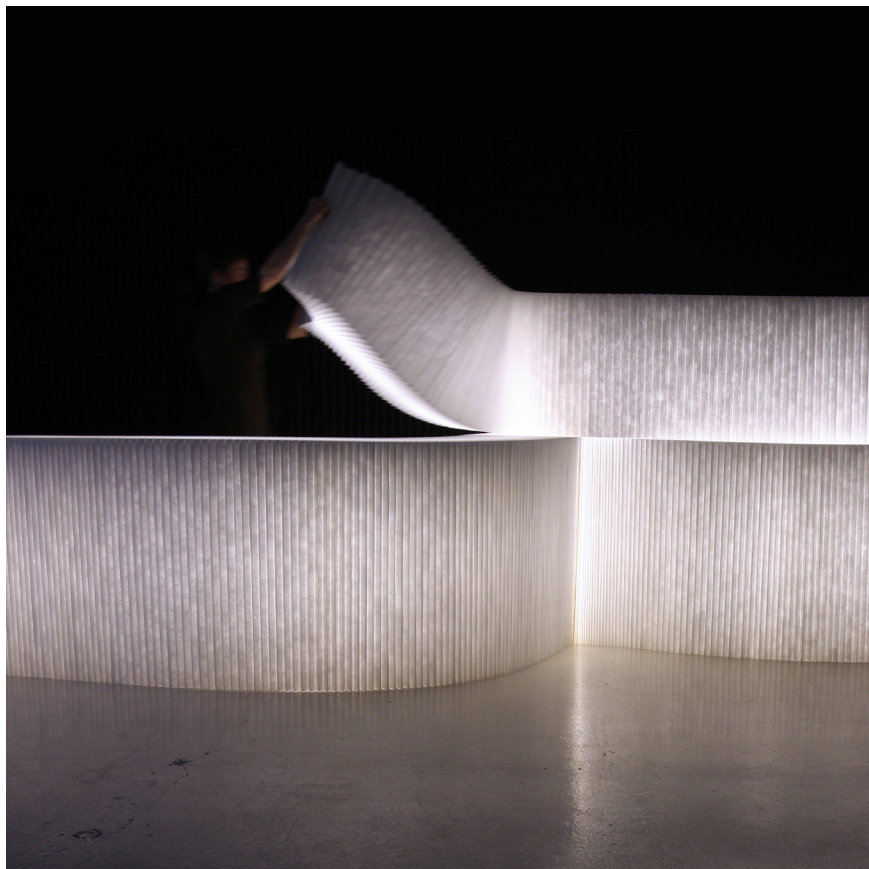

Flexible LED ribbons, designed to go inside the horizontal tunnels of textile softwall + softblock are available from molo in two colour temperatures, a neutral 'daylight white' (4200K) and a 'warm white' (2500K). Only one LED ribbon is needed to create beautifully defused, gradated light within a 1830mm (6') tall softwall.

This luminous version of softwall + softblock emphasizes their visually delicate fibres and airy, lightweight structure. Illuminated from within, softwall + softblock become a partition and a luminary; their expansion, contraction, and fluid movement are all the more magical.
